

Fix for WindowsXP SP2

How to repair a copy of MDAC 2.8 on WinXP with SP2 installed

Option 1:

- locate the mdac.inf file in c:\windows\inf , right click and install
- when prompted for a location, point to "c:/windows/servicepackfiles/i386" then when prompted for the XPcd, either load the cd or point to c:\i386

Option 2:

- locate the mdac.inf file in c:\windows\inf , right click and install
- when prompted for a location, insert XPcd, point to the I386 folder and open the ADCJAVAS.IN_ file(this file will be selected by default)

* Restart computer
